OCTOFLY

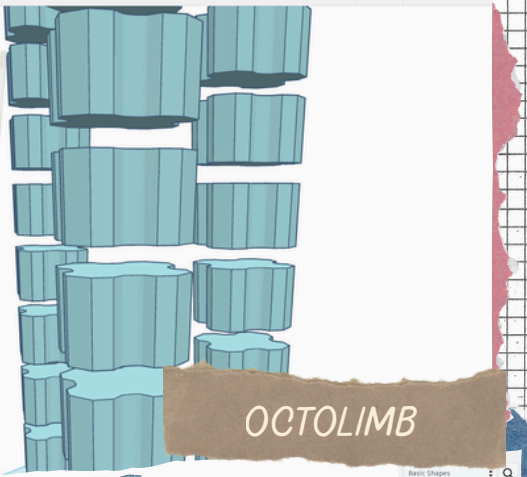
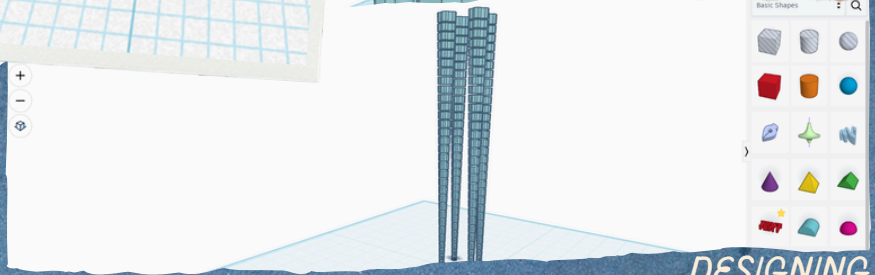
DETAILED VIEW



OCTOLIMB



DESIGNING

WHAT IS OCTOFLY?

A FLYING OCTOPUS, LIKE IT WOULD BE A DRONE BUT WITH THE OCTOPUS INSPIRED LIMBS MAKING IT EASY TO GRAB AND BRING ANY OBJECT WITH BETTER GRIPS, AND BETTER ACCESSIBILITY BRINGING A REVOLT IN ROBOTIC DATA COLLECTION FROM ANY DATA SITE(PLACE).

WHY PROBLEM DOES IT SOLVE?

UMNN....WE KNOW THAT TILL DATE DRONES ARE NOT ADVISED IN CARRYING OBJECT DUE TO IT'S GRIP...BUT OCTOFLY SOLVES THIS PROBLEM IT PROVIDES EXTREME GRIP EVEN IN AIR.. IN TERMS THAT IT WOULD LOSE BALANCE WHEN IT WOULD GRAB OBJECT DUE TO UNEVEN DISTRIBUTION OF MASS...BUT FOR THAT WE WILL USE GYRO SENSOS WHICH WILL IMMEDIATELY INCREASE THE FALLING SIDE'S MOTOR POWER OF THE DRONE THAT WOULD BALANCE THE WEIGHT THUS MAINTAINING PERFECTION EVEN IN AIR.
